TO: ELEC-TRAK TRACTOR DEALERS

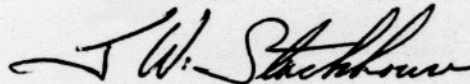

SUBJECT: 6-VOLT BATTERY CONTAINER

Our battery source is experiencing a shortage of red concentrate used in the polypropylene battery containers. For this reason, they will be going to a translucent container with a red cover for the 6-volt Heavy Duty and a black top for the 6-volt Standard. The 12-volt will continue to be all red.

This change in specification will not effect performance. In fact, they have found the translucent containers to have some higher impact strength.

This will be on a running change basis.

Sincerely,

J. W. Stackhouse
