The Elec-Trak tractor by its very design simplicity lends itself to a wide diversity of applications, only some of which are covered in this pamphlet. For complete information on how we can help you save time, money and manpower, write or phone:

**General Electric Company
Outdoor Power Equipment Operation
Corporations Park, Building 702
Schenectady, N.Y. 12305**

or consult your yellow pages for the location of your nearest Outdoor Power Equipment Dealer.

These instructions do not purport to cover all details or variations in equipment nor to provide for every possible contingency to be met in connection with installation, operation or maintenance. Should further information be desired or should particular problems arise which are not covered sufficiently for the purchaser's purposes, the matter should be referred to the General Electric Company.

Elec-Trak® Tractor **Complete Power Center On Wheels**

Available at 1/3 the cost of most Industrial Tractors. General Electric's new rechargeable Elec-Trak tractor handles many commercial, municipal and industrial applications — in addition to a whole new array of tasks ranging from welding to weeding. It's all-electric design permits amazing application versatility.

Quiet, clean and fumeless, the electric tractor hauls heavy loads for up to five *rolling* hours on one charge and has easily performed a variety of hauling tasks for up to 2 full shifts. In pulling tests, it has hauled a 30,000 lb. airplane and a 34,000 lb. fire truck.

Virtually an electric power center on wheels, the compact tractor easily handles traditional lawn and grounds-keeping jobs. It mows 2 to 5 acres on one charge depending on the mower used. Its 48" remote angling plow, 48" V-plow, or 42" snow thrower and high traction lets it plow or throw snow up to two feet deep. Its complete line of attachments includes portable 36-volt

plug-in power tools, edgers, trimmers, saws. For mobile maintenance, the service-center cart with a plug-in DC arc welder and bench grinder can put your repair shop on wheels.

Only 36-39 inches wide, Elec-Trak tractors cruise narrow corridors at up to 9 mph even with two aboard. They've got instant on and off starting in any weather, indoors and out, and there's no engine noise or noxious exhaust fumes. The built-in automatic recharger uses any 110 volt/15 amp outlet and recharges the tractor at almost 20% per hour. You can forget yearly tuneups and downtime due to frequent maintenance checks, and there is no need to buy or store volatile fuel.

Elec-Trak tractors are being adapted to new jobs in factories, warehouses and merchant businesses every day. Some of the many application innovations on the following pages may apply to your business. If not, there are many more on the way.
